***Reasons for Allowance***

1. Claims 1-44 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claims invention of classifying data by training a stochastic key feature generation model using training data and associated summaries whereby the trained model maps data into vectors that are classified by categories and used to train a classifier. Alternatively, a previously trained classifier using training data and associated summaries receives a vector to be classified from a process using a key feature generation model and data. Alternatively, train a text classifier using training text and a plurality of summaries and further associating such text with related categories and then classifying text without related summaries. Alternatively a key feature generation model-based generation module to generate a vector based on a key feature model, formed from training data and summaries, and data and a classifier to receive such vector and to classify such vector.

The closest prior art (Raskutti et al, USPubN 2006/0089924) teaches document categorization system which includes generating clusters of related electronic documents based on features and a filter to learn a model(s) - to further categorize the documents. Raskutti does not teach model development to establish vectors with associated categories and train a classifier.

Independent claims 1, 21, 25, 30, 40 and 43 provide a result that is a practical application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
